TOTAL Facility Solutions

Air Systems is a one-stop shop for comprehensive facilities solutions. Professional engineers and project managers consistently go above and beyond the call of duty for clients, while keeping projects on schedule and on budget. Using advanced technology such as Building Information Modeling (BIM) and fully automated and computerized duct and pipe fabrication, the Air Systems team works to increase efficiency, productivity, and speed to completion. And because Air Systems offers an inclusive range of services, the planning and execution of most projects is integrated, assuring a streamlined process with a single point of contact.

With 40+ years of experience serving California's Bay area, Air Systems, an EMCOR Company, is one of Northern California's most experienced total facilities solutions providers. Employing licensed, qualified, and certified technicians proficient with virtually every make and model of equipment, Air Systems provides total facility solutions services.

Architectural Sheet Metal Air Systems' award-winning Architectural Sheet Metal division has complete in-house fabrication facilities to meet challenging project demands while still completing projects on time, with unrivaled craftsmanship.

Preventive Maintenance & Service Whether working on a central plant system, a high rise, or a single-story location, Air Systems' highly trained technicians can maintain virtually any type of HVAC equipment. Preventive maintenance and service programs are tailored to meet specific building needs.

Electrical Integrated electrical and mechanical services result in fast, cost-effective turnkey installations. As an I.B.E.W. contractor fully staffed with factory-trained technicians, Air Systems can install complete electrical systems, including AC and DC power, controls integration for HVAC systems, and nearly everything in between.

High-Purity Process Piping Exceeding the rigid quality control standards of the semiconductor, biotechnology, and pharmaceutical industries for over 20 years.

HVAC Air Systems' HVAC Design/Build Division is comprised of professional engineers who are committed to taking client projects from inception to completion in a timely and efficient manner.

Plumbing Air Systems' past plumbing projects have included industrial facilities, multi-discipline buildings, commercial buildings, and the engineering and installation of acid waste systems and waste treatment plants.

Building Automation Systems Increase energy efficiency, minimize process downtime, and enhance occupant comfort with building automation. Air Systems is an authorized dealer for Automated Logic Controls, Johnson Controls, and Cisco.

Energy Solutions Air Systems helps evaluate a building's performance in order to keep costs and usages under control. The evaluation process assesses: current facility operating costs, energy usage, CO2 emissions, and strategic opportunities for savings.
